

“He went back into the closet”

Older LGBTI people’s interactions with
health and social care in the Nordic countries

A Nordic report on older LGBTI people in the Nordic countries

There is a lack of knowledge about the experiences and needs of older LGBTI people in the Nordic countries. This is shown in a report from NIKK on the living conditions of older LGBTI people and their encounters with health and social care.

The Nordic report includes a research overview that describes the research on the living conditions of older LGBTI people and a knowledge inventory that describes how the LGBTI perspective is taken into account in courses and study programmes for professions that encounter the targetgroup.

The report includes recommendations for healthcare and social care, for professional qualification study programmes, for continuing professional development (CPD) and for continued research.
